

1. The used LLM tool

ChatGPT Default (GPT-3.5)

2. Motivation/reason to use LLM

To get assistance to the unfamiliar issues encountered during the development

3. How and why LLM helped

It helped me to sort out some knowledge gaps when developing the service1. I did not know how to get the IP address of the service2 from the golang service1.

4. What kind of mistakes LLM did

It suggested some wrong approaches without fully understanding the context of the issue and I had to deduce the solution by myself using the inputs provided by the tool as a guidance.

5. What were things that LLM was not able to provide

As I mentioned above, it could not provide a well rounded solution to my issue. Every solution has some sort of loose end.
